Hydradermic Treatments

The Guinot *Hydradermic* facial is the most advanced beauty salon treatment for maintaining a balanced healthy complexion. It deep-cleanses, oxygenates and regenerates the skin. Regular Hydradermic treatments offer immediate and lasting results: they improve hydration in dry skin, reduce sebum levels in oily skin, and reduce average wrinkle depth in lined skin.

The facial uses the Hydraderm machine (unique to Guinot), manual massage and bespoke plant-based extracts to restore the skin's natural beauty. After analysing the client's skin, the Guinot skincare expert customises the products used in the facial to treat normal/dry, sensitive, oily, mature or hyper pigmented skin. Once the skin is cleansed and gently exfoliated, the beauty therapist applies the carefully selected gels and uses mild galvanic current to help the active ingredients penetrate deep into the skin to remove impurities and toxins. High frequency action is then used to oxygenate and boost cells before a massage and a customised mask. A touch of moisturiser for the eye contour, face and neck concludes the treatment.

Hydradermic

A superior facial with an international reputation

A monthly deep cleansing, regenerating Hydradermic facial will keep your skin in optimum condition. The therapist will customise the treatment to suit your skin type: de-hydrated, mature, oily, sensitive or pigmented

PHOTO REJUVENATION

The desire for youthful skin tone and appearance is something that has intrigued people for thousands of years... The discovery of Intense Pulsed Light as a means of treatment is believed to be the greatest advance in this field for many years, and has taken the market by storm. Conditions that can be treated include:

- Age spots Sunspots
- Premature skin aging
- Sun damage (in both older and younger skin)
- Wrinkles
- Pigmentation
- Broken capillaries

These conditions are all easily treatable, but more importantly, Coolite IPL induces natural healing within the body, with no signs of treatment or adverse side effects.

HOW DOES IT WORK?

Treatments consist of several applications spread out at 2-3 week intervals.

The amount of sessions needed varies from client to client, but typically 5-6 sessions will be sufficient. Coolite IPL uses a broadband of light from 600-1200 nanometers that is gently transmitted via a glass applicator that is lightly placed on the skin. The light transmitted is then captured by the lower layers of skin, and tissue. This gently heats the area up and stimulates blood flow as well as collagen production. The result of this is renewed younger looking skin and smoother appearance.

Prices for all the above treatments by application.

ECCO IPL HAIR REMOVAL

- Safe
- Fast
- Painless
- Proven Clinical Results
- Trained and Certified therapists

UNWANTED HAIR GONE IN A FLASH
INTENSE LIGHT PULSE THERAPY FOR PERMANENT HAIR REDUCTION

How does the system work?

The ECCO IPL hair removal system produces a high intensity, flash of filtered light from the applicator head, which has been placed in contact with the skin. The energy from the light source is absorbed by the pigment melanin, which is the chromophore, which gives hair its colour. The hair rapidly absorbs this filtered light and transfers it to the surrounding cells that in turn are converted into heat raising them to a temperature of 70 degrees Centigrade or more. The heating denatures the cells making them incapable of producing further hair growth.

How is the treatment carried out?

The glass applicator is placed in contact with skin surface and the light is pulsed through it onto the skin. The applicator is then moved to the neighbouring area and the process is repeated. Can be applied to all areas of the face and body and all skin and hair colours for ladies and gentlemen.

ACNE (ACTIVE)

It is estimated that around 60-70% of people in this country will suffer from acne at some point in their lives. Today people are more conscious than ever about their appearance and it is no surprise that acne is one the largest sources of complaint that therapists try to deal with. It is now possible to treat acne using IPL technology to produce quite dramatic results in typically only 4-5 weeks.

HOW DOES IT WORK?

The affected area is cleansed at first, and then treatment may commence.

During treatment, what actually happens is that the light penetrates to deep within the skin and down into the acne Pustule itself. There the light is absorbed and has two effects:

1. The bacteria within the pustule is heated and gently destroyed.
2. The production of naturally occurring chemicals within the body that attack these bacteria is stimulated. This results in a reduction of visible acne as well as a reduction in the acne's ability to regenerate.

ACNE (POST)

Whilst acne sufferers will be happy to reduce and eventually get rid of their acne, they are often left with some degree of scarring that is often displeasing especially around the facial area. These scars can now be treated using IPL therapy similar to that used for "Photo rejuvenation". Colobite IPL helps restructure the skin's surface to a smoother, younger appearance full of vitality.

HOW DOES IT WORK?

Simply by stimulating the blood circulation which helps the skin regenerate naturally and by penetrating deeper beyond the upper layers of skin where the body's natural reaction to the absorption of light is to produce extra collagen.

This dual effect results in smoother renewed skin and visibly reduced scarring.

SPIDER VEINS, THREAD VEINS OR "RED VEINS"

These are among some of the more common complaints that therapists hear about. With Colobite IPL it is now possible to gently treat these conditions with no need for costly surgery. The aim of treatment is to dissolve the smaller more superficial veins in a short period of time, whilst larger veins that cannot be dissolved have their flow sealed and cut of thus reducing any unattractive appearance.

HOW DOES IT WORK?

Light from 600-1200 nanometers is pulsed into the skin via a glass applicator. Blood absorbs the light at a sufficient rate to heat up whilst minimizing the skin's absorption, thus reducing the "heat" sensation that the skin would otherwise experience. The temperature within the blood vessel raises enough to collapse and break down gradually and to be naturally dispersed through the body.
